

Fifth Wheel Grease

Product Characteristics

Amstar Fifth Wheel Grease has been designed specifically for fifth wheel applications where stay-in-place performance is critical under all weather and application conditions. In this application it is common for the fifth wheels to experience extreme fretting wear. Fretting wear occurs where there is oscillatory motion/vibration of the contacting surfaces under load. To minimize wear and longevity of the fifth wheel **Amstar Fifth Wheel Grease** formulation is built with maximum stay-in-place performance and designed to carry heavy loads during the harshest conditions. In addition this grease has 10% lubricating solids; it's there if you need it.

Product Typical Data

NLGI Grade	NLGI	#2
Thickener Type	--	Lithium
Appearance	Visual	Black/Tacky
4-ball EP, weld point, kg.	ASTM D-2596	500
Rust Prevention	ASTM D-1743	PASS
Water Spray-Off (% wt)	ASTM D-4049	< 10%
Mobiity @ 60 F (grams/minute)	US Steel	100
